(Breyanzi®)

Policy Number: 291

Effective Date: 11/1/2024

Last Review: 08/12/2024

Next Review: 08/12/2025

Important note: Unless otherwise indicated, medical policies will apply to all lines of business.

Medical necessity as defined by this policy does not ensure the benefit is covered. This medical policy does not replace existing federal or state rules and regulations for the applicable service or supply. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan documents. See the member plan specific benefit plan document for a complete description of plan benefits, exclusions, limitations, and conditions of coverage. In the event of a discrepancy, the plan document always supersedes the information in this policy.

SERVICE: Lisocabtagene Maraleucel (Breyanzi®)

PRIOR AUTHORIZATION: Required

POLICY: Please review the plan's EOC (Evidence of Coverage) or Summary Plan Description (SPD) for details.

For Medicare plans, please refer to <u>Medicare NCD 110.24 Chimeric Antigen Receptor (CAR) T-cell Therapy</u>

For Medicaid plans, please confirm coverage as outlined in the <u>Texas Medicaid Provider Procedures</u> <u>Manual | TMHP</u> (TMPPM). Texas Mandate HB154 is applicable for Medicaid plans.

Baylor Scott & White Health Plan (BSWHP) may consider lisocabtagene maraleucel (Breyanzi®) medically necessary for the treatment of Large B-cell lymphoma (LBCL), Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma (CLL/SLL), Mantle Cell Lymphoma (MCL), or Follicular Lymphoma (FL) when ALL of the following universal criteria are met as well as criteria specific to each indication below:

Universal Criteria Applied to All Requests

- 1. Member is ≥ 18 years old; **AND**
- 2. Member diagnosed by a hematologist or oncologist; AND
- 3. Member has an Eastern Cooperative Oncology Group (ECOG) performance status of 0 or 1; **AND**
- 4. Member has adequate bone marrow, renal, hepatic, pulmonary, and cardiac function; AND
- 5. Member is eligible for apheresis; AND
- 6. Member has documentation of CD-19 tumor expression: AND
- 7. Member has NOT received prior treatment with CD-19 targeted CAR-T cell therapy (e.g. axicabtagene, tisagenlecleucel, brexucabtagene); **AND**
- 8. If the member has received prior treatment with anti-CD19 therapy (e.g., tafasitamab, loncastuximab) the member's repeat biopsy indicated CD-19 positive disease; **AND**
- 9. Request is for a one-time, single administration treatment; AND
- 10. Member will NOT be treated with more than 110 x 106 viable CAR-T cells; AND
- 11. Member has or will receive lymphodepleting chemotherapy (e.g., fludarabine 30 mg/m² IV daily and cyclophosphamide 300 mg/m² IV daily) before infusion of liscabtagene maraleucel; **AND**
- 12. Provider attests all REMS program requirements are met: AND

SERVICE: Lisocabtagene Maraleucel

(Brevanzi®)

Policy Number: 291

Effective Date: 11/1/2024

Last Review: 08/12/2024

Next Review: 08/12/2025

- 13. Member does NOT have any of the following conditions:
 - a. Primary central nervous system (CNS) malignancy
 - b. Active hepatitis B (HBs AG-positive), active hepatitis C, HIV infection, or uncontrolled
 - c. History of CNS disorders (ex. seizure disorder, cerebrovascular ischemia)
 - d. Active inflammatory disorder requiring systemic immunosuppression
 - e. Richter transformation
 - f. Active graft versus host disease (GVHD)
 - Allogeneic hematopoietic stem-cell transplantation in the preceding 84 days before leukapheresis
 - h. Unmanaged venous thrombosis or embolism
 - Pregnant

Indication Specific Criteria

Large B-cell lymphoma (LBCL) specific criteria:

- 1. Member meets all universal criteria; AND
- 2. Member has a diagnosis of Large B-cell lymphoma [i.e. diffuse large B-cell lymphoma (DLBCL) not otherwise specified (including DLBCL arising from indolent lymphoma), high-grade B-cell lymphoma, primary mediastinal large B-cell lymphoma, and follicular lymphoma grade 3B]; AND
- 3. Member has one of the following:
 - a. Relapsed or refractory disease after two or more prior lines of systemic therapy
 - b. Refractory disease to first-line chemoimmunotherapy or relapse within 12 months of first-line chemoimmunotherapy
 - c. Refractory disease to first-line chemoimmunotherapy or relapse after first-line chemoimmunotherapy and is not eligible for hematopoietic stem cell transplantation (HSCT) due to comorbidities or age

Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma (CLL/SLL) specific criteria:

- 1. Member meets all universal criteria; AND
- 2. Member has a diagnosis of relapsed or refractory Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma; AND
- 3. Member has received two or more prior lines of systemic therapy, including a Bruton tyrosine kinase (BTK) inhibitor (i.e., ibrutinib, acalabrutinib, zanubrutinib, or pirtobrutinib) and a B-cell lymphoma 2 (BCL-2) inhibitor (i.e., venetoclax)

Mantle Cell Lymphoma (MCL) specific criteria:

GHTCARE

1. Member meets all universal criteria; AND

RT OF BAYLOR SCOTT & WHITE HEALTH

- 2. Member has a diagnosis of relapsed or refractory Mantle Cell Lymphoma confirmed with cyclin D1 expression or evidence of t(11;14) by cytogenetics, fluorescence in situ hybridization (FISH), or polymerase chain reaction (PCR); **AND**
- 3. Member has received two or more prior lines of systemic therapy, including a Bruton tyrosine kinase (BTK) inhibitor (i.e., ibrutinib, acalabrutinib, zanubrutinib, or pirtobrutinib)

Follicular Lymphoma (FL) specific criteria:

- 1. Member meets all universal criteria; AND
- 2. Member has histologically confirmed relapsed or refractory Follicular Lymphoma grade 1, 2, or 3a; **AND**
- 3. Member has received two or more prior lines of systemic therapy, including a CD-20 antibody (e.g., obinutuzumab, rituximab) and an alkylator (e.g., bendamustine, cyclophosphamide)

Only ONE dose per lifetime is medically necessary.

All requests will be reviewed by a clinical pharmacist and medical director.

BSWHP considers lisocabtagene maraleucel (Breyanzi®) for the treatment of all other indications to be **experimental**, **investigational**, **and/or unproven**.

BACKGROUND:

Chimeric antigen receptor (CAR) T cells and genetically engineered T-cell receptor (TCR T) cells are manufactured by collecting lymphocytes from a patient or donor and modifying them using gene transfer techniques. Viral vectors are introduced that express cell receptors that are highly specific for tumor antigens. CAR T and TCR T cells are then infused back into the patient where they direct a targeted immune response to cancerous tissue. CAR T cells express a hybrid receptor with an extracellular single-chain antibody fragment, a transmembrane domain, and at least 1 intracellular signaling domain. CAR T cells are most often used to treat hematological malignancies, and a common target is B-cell cluster of differentiation antigen 19 (CD19).

The U. S. Food and Drug Administration (FDA) granted approval for lisocabtagene maraleucel (Breyanzi®) on February 5, 2021 for the treatment of adult patients with relapsed or refractory large B-cell lymphoma after two or more lines of systemic therapy, including diffuse large B-cell lymphoma (DLBCL) not otherwise specified (including DLBCL arising from indolent lymphoma), high-grade B-cell lymphoma, primary mediastinal large B-cell lymphoma, and follicular lymphoma grade 3B. The boxed warning includes the clarification that lisocabtagene maraleucel is available only through a restricted program under a Risk Evaluation and Mitigation Strategy (REMS) because of the risk of cytokine release syndrome (CRS) and neurological toxicities.

Policy Number: 291

Effective Date: 11/1/2024

Last Review: 08/12/2024

Next Review: 08/12/2025

The FDA approval of lisocabtagene maraleucel is based on data from the TRANSCEND (NCT02631044) open-label, multicenter, single-arm Phase I trial involving 299 patients, 204 receiving treatment in the intended dose range, of whom 192 were evaluable for efficacy. Results showed that 54% of those taking lisocabtagene maraleucel had a complete response, with another 19% having a partial response. Among the complete responders, 65% had remission lasting at least 6 months and 62% had remission lasting at least 9 months. With respect to safety, the most common grade 3 or higher adverse effects were neutropenia (76%) and thrombocytopenia (39%). Serious adverse reactions occurred in 46% of patients.

Large B-cell Lymphoma

GHTCARE

The FDA updated approval of lisocabtagene maraleucel to include treatment for adult patients with relapsed or refractory Large B-Cell Lymphoma (LBCL) after first-line chemoimmunotherapy based on a randomized, open-label, multicenter trial (TRANSFORM; NCT03575351). The estimated 1-year event free survival was 45% in the lisocabtagene maraleucel arm and 24% in the standard therapy arm. 66% of lisocabtagene maraleucel arm achieved complete response vs 39% in the standard therapy arm.

Lisocabtagene maraleucel was evaluated in a single-arm, open-label, multicenter trial (PILOT; NCT03483103) in transplant-ineligible patients with relapsed or refractory LBCL after one line of chemoimmunotherapy. Overall response rate was 80% with lisocabtagene maraleucel with 54% complete response.

Chronic Lymphocytic Leukemia/Small Lymphocytic Lymphoma

RT OF BAYLOR SCOTT & WHITE HEALTH

The U. S. Food and Drug Administration (FDA) granted approval for lisocabtagene maraleucel (Breyanzi®) on March 21, 2024 for the treatment of adult patients with relapsed or refractory chronic lymphocytic leukemia (CLL) or small lymphocytic lymphoma (SLL) after two or more prior lines of systemic therapy, including a Bruton's tyrosine kinase (BTK) inhibitor and a B-cell lymphoma-2 (BCL-2) inhibitor.

The FDA approval of lisocabtagene maraleucel is based on data from the TRANSCEND CLL 004 (NCT03331198) open-label, multicenter, single-arm, Phase 1-2 trial involving 117 patients. Patients had received and had treatment failure on a previous BTK inhibitor. The primary efficacy analysis was conducted on a subset of patients who had also experienced venetoclax failure (n=70) and were treated with dose level 2 (n=49). In the primary efficacy analysis, the rate of complete response or remission (including with incomplete marrow recovery) was statistically significant at 18% (n=9; 95% Cl 9-32; p=0.0006). In patients treated with lisocabtagene maraleucel, grade 3 cytokine release syndrome was reported in ten (9%) of 117 (with no grade 4 or 5 events) and grade 3 neurological events were reported in 21 (18%; one [1%] grade 4, no grade 5 events). Among 51 deaths on the study, 43 occurred after lisocabtagene maraleucel infusion, of which five were due to treatment-emergent adverse events (within 90 days of lisocabtagene maraleucel infusion). One death was related to lisocabtagene maraleucel (macrophage activation syndrome-haemophagocytic lymphohistiocytosis).

Follicular Lymphoma

The U. S. Food and Drug Administration (FDA) granted approval for lisocabtagene maraleucel (Breyanzi®) on May 15, 2024 for the treatment of adult patients with relapsed or refractory follicular lymphoma (FL) after two or more prior lines of systemic therapy including, including an anti-CD20 antibody and an alkylating agent.

The FDA approval of lisocabtagene maraleucel is based on data from the TRANSCEND-FL (NCT 04245839) open-label, multicenter, single-arm, Phase 2 trial involving 130 patients. The primary efficacy population included 94 patients with PET-positive disease at baseline or after bridging therapy, received conforming product in the intended dose range, and had at least 9 months of follow up from first response. The main efficacy outcome measures were overall response rate (ORR), defined as the percentage of patients with a best overall response (BOR) of complete response or partial response after lisocabtagene maraleucel infusion, and duration of response (DOR) as determined by an independent review committee. The ORR was 95.7% (95% CI: 89.5, 98.8). After a median follow up of 16.8 months (95% CI: 16.3, 17.0), the median DOR was not reached (NR) (95% CI: 18.04, NR). The most common nonlaboratory adverse reactions (≥20%) were cytokine release syndrome (CRS), headache, musculoskeletal pain, fatigue, constipation, and fever.

Mantle Cell Lymphoma

The U. S. Food and Drug Administration (FDA) granted approval for lisocabtagene maraleucel (Breyanzi®) on May 30, 2024 for the treatment of adult patients with relapsed or refractory mantle cell lymphoma (MCL) after two or more prior lines of systemic therapy, including a Bruton tyrosine kinase inhibitor (BTKi).

The FDA approval of lisocabtagene maraleucel is based on data from the TRANSCEND-MCL (NCT 02631044) open-label, multicenter, single-arm, Phase 1 trial involving 88 patients. Patients had received at least two prior lines of therapy including a Bruton tyrosine kinase inhibitor, an alkylating agent, and an anti-CD20 agent. The primary efficacy analysis included a total of 68 patients with MCL who received at least 2 prior lines of therapy including a BTKi, had PET-positive disease at study baseline or after bridging therapy, received conforming product in the intended dose range, and had at least 6 months of follow-up from the date of first response. The main efficacy outcome measure was overall response rate (ORR), defined as percentage of patients with best overall response (BOR) of either complete response (CR) or partial response (PR) after lisocabtagene maraleucel infusion, as determined by an independent review committee (IRC) using 2014 Lugano classification. Other efficacy measures included complete response rate (CRR) and duration of response (DOR), as determined by IRC. The ORR was 85.3% (95% CI: 74.6, 92.7) and the CRR was 67.6% (95% CI: 55.2, 78.5). After a median follow-up of 22.2 months (95% CI: 16.7, 22.8), the median DOR was 13.3 months (95% CI: 6.0, 23.3). The most common nonlaboratory adverse reactions (≥ 20%) were cytokine release syndrome (CRS), fatigue, musculoskeletal pain, encephalopathy, edema, headache, and decreased appetite.

CODES:

Important note: Due to the wide range of applicable diagnosis codes and potential changes to codes, an inclusive list may not be presented, but the following codes may apply. Inclusion of a code in this section does not guarantee that it will be reimbursed, and patient must meet the criteria set forth in the policy language.

CPT Codes:	0540T - Chimeric antigen receptor T cell (CAR-T) therapy; CAR-T cell
	administration, autologous
	96409 - Chemotherapy administration; intravenous, push technique, single or
	initial substance/drug
	96413 - Chemotherapy administration; intravenous infusion technique; up to 1
	hour, single or initial substance/drug
HCPCS Codes:	Q2054 Lisocabtagene maraleucel, up to 110 million autologous anti-CD19 car-
	positive viable t cells, including leukapheresis and dose preparation procedures,
	per therapeutic dose
ICD10 codes:	C82.00 - C82.69, C82.80 - C82.99 Follicular lymphoma
	C83.00 – C83.09 Small cell B-cell lymphoma
	C83.10 – C83.19 Mantle cell lymphoma
	C83.30 - C83.39 Diffuse large B-cell lymphoma
	C83.90 - C83.99 Non-follicular (diffuse) lymphoma
	C85.20 - C85.29 Mediastinal (thymic) large B-cell lymphoma
	C91.10 Chronic lymphocytic leukemia of B-cell type not having achieved remission
	C91.12 Chronic lymphocytic leukemia of B-cell type in relapse
ICD10 Not covered:	

POLICY HISTORY:

Status	Date	Action
New	04/22/2021	New policy
Updated	05/27/2021	Removed Oncology Analytics line, added apheresis criteria
Updated	07/22/2021	Added clinician reviewer criteria
Updated	06/23/2022	Added NCD information
Updated	10/27/2022	Removed language with CMS LCD since NCD applies. Updated HCPCS code. Added new criteria for relapsed/refractory disease after first-line chemoimmunotherapy. Removed Texas Mandate HB1584 language from main policy section as the policy is compliant. Minor formatting update.
Reviewed	10/09/2023	Applied new layout and format.
Updated	08/12/2024	Added three new indications, updated treatment center to REMS, updated layout (dividing criteria into "universal criteria" and "indication specific criteria"), added additional exclusion criteria (13d-i), modified universal criteria (8), updated background to include CLL/MCL/FL, updated ICD10 codes (C82.00 – C82.69, C82.80 – C82.99, C83.00 – C83.09, C83.10 – C83.19, C91.10, C91.12)
